

**NEW!**

## “Water-Shed” Sill

# Stop Water At The Door

The first-of-its-kind, **Water-Shed** sill, is an all-new patent-pending exterior door inswing sill that actually takes any water that might infiltrate past the door sill and sweep, and channels it back outside the home where it belongs.

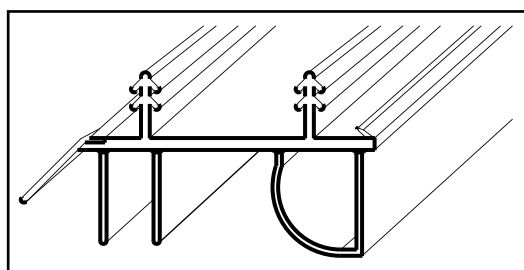

With its unique design, **Water-Shed** offers a built-in weep system, giving your entry door an advantage over other door systems. Using the **Water-Shed** on your entry system will help eliminate costly water leaks inside the home.

**Front Sweep Fins Deflect Most of Water**

**Sill Drains**  
Any water that does get past the primary seal goes into a channel, where water is drained back outside the home through weep holes.

**Effective and Simple**  
Weep holes in the sill rail catch any water before it enters the home, allowing water to exit through the water-tight compartment, back to the exterior.

**Durable Sweep**  
Our flexible rubber sweep has two fins, large interior bulb, and a built-in exterior fin to deflect water run off.

### **Butyl End Seal Gasket**

The butyl end seal gaskets not only bonds the sill to the jamb leg, but provide a water-tight seal against water leaks.

The **Water-Shed** sill is a patent-pending configuration brought to you by Codel Entry Systems. Contact us to learn more.
